ABOUT ME

I'm attending the third year of the computer science degree at the University of Porto. As a college student, I have developed an interest in several areas such as software development, data science and artificial intelligence.

I have demonstrated better performance in UCs such as "Databases", "Web Technologies", "Introduction to Intelligent Autonomous Systems", and "Artificial Intelligence", where the assignments I've done are available on my GitHub profile.

Outside the academic context, I developed an inclination for graphic design and photography. From a social point of view, I have been seeking to integrate myself into university projects and groups to expand my knowledge, whether related or unrelated to my degree.
