ABOUT ME

I'm attending the second year of the computer science degree at the University of Porto. As a college student, I have developed an interest in several areas such as software development, data science and machine learning.

Outside the academic context, I developed an inclination for graphic design and photography. Throughout this period, I acquired skills in these areas and consequently got some part-time job opportunities.

From a social point of view, I have been seeking to integrate myself into university projects and groups, to expand my knowledge, whether related or unrelated to my degree.
